Allowable Subject Matter

Claims 1-35 are allowed.

The following is an examiner's statement of reasons for allowance: although the prior art of record discloses designing a circuit comprising the derivation of circuit block constraints as described below, the prior art of record does not disclose, teach, or suggest deriving a fan-in cone function for each block input of a plurality inputs of a circuit block, each fan-in cone function comprising a corresponding clock input variable expressed as a function of at least one fan-in cone variable, conjoining the fan-in cone functions for each block input of the plurality into a circuit block constraint function, and quantifying the circuit block constraint function to provide at least one circuit block constraint as a function of block input variables.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. CHEN et al. ["Parallel Construction Algorithms for BDDs"] disclose replication of fanin cones. WANG et al. ["Automatic Generation of Assertions for Formal Verification of PowerPC™ Microprocessor Arrays Using Symbolic Trajectory Evaluation"] disclose assertion creation. YEH et al. ["Variable ordering for ordered binary decision diagrams by a divide-and-conquer approach"] disclose cluster

partitioning and ordering by interleaving. ZENG et al. ["A Fault Partitioning Method in Parallel Test Generation for Large Scale VLSI Circuits"] disclose Toward Fault Partitioning of Input fan-out Cones (TFPIC). Martin et al. [U.S. Patent #6,931,611 B2] disclose trace back to generate assertions. Moondanos et al. [U.S. Patent #6,792,581 B2] disclose frontier selection. Martin et al. [U.S. Patent #6,378,112 B1] disclose equivalence checking. Jain et al. [U.S. Patent #6,301,687 B1] disclose verification using filtering.
